

DocuWare iPaaS Connectors

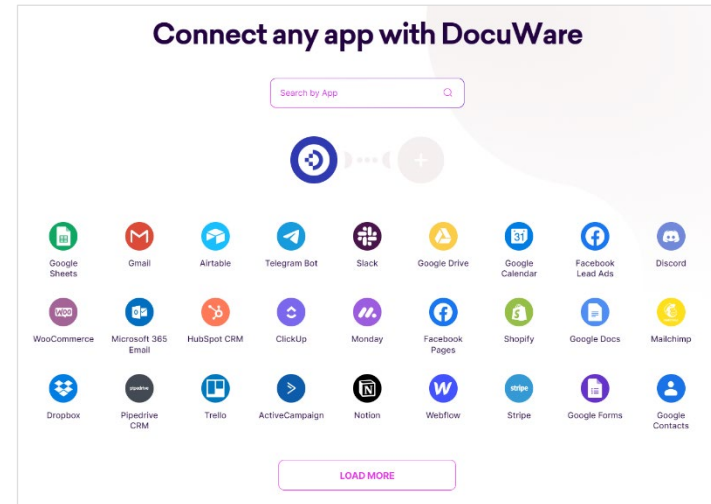

Connect DocuWare Cloud to over 1,000 other cloud applications. Create business workflows across multiple systems. Benefit from the convenience of professionally hosted automation platforms.

Integrate cloud systems easily

While data is safely stored in the cloud, it can lead to data silos. Cloud systems are by their nature very isolated, and the programming of interfaces is also quite complex.

With DocuWare iPaaS connectors, you can bring your data back into your business.

On iPaaS platforms such as Make, you can connect your DocuWare Cloud with other business applications and keep your company's workflows humming. Cost traps from faltering processes are avoided.

One platform, many providers: Most of the major business applications are available on Make for integration with DocuWare, including the standard, widely used ones as well as specialized apps for industry use cases.

Key advantages of iPaaS connectors at a glance:

- Automated workflows without limits between different cloud applications
- Consistent data across an enterprise
- Workflows created intuitively using a clickable interface
- Integration of cloud applications without time-consuming special programming and constant adjustments after updates.

Automated Workflows with cloud applications

Automated workflows speed up processes in a company, especially when you can link up different cloud applications.

- For example, **invoice booking data** archived in DocuWare and passed the invoice verification process in DocuWare are automatically transferred to an ERP or accounting software.
- Or company **master data from a CRM** is compared with DocuWare so that the data in all systems involved is always up to date and correct data is used for document searches.

Data that is integrated into workflows via iPaaS platforms is also **protected**. At Make, for example, both the European and American data protection areas are covered by one AWS data center each in Germany and the USA.

More details can be found on the platforms of the respective iPaaS providers.

Get started with DocuWare iPaaS Connectors

Make.com

The connector on Make is available for free. On the DocuWare side, no special license is required, only a client license, to log in to DocuWare. The billing of transactions is usage-based directly via [Make](#).

iPaaS. The term refers to cloud-based services with which applications from cloud and on-premise environments can be integrated. Make, elastic.io and webmethods.io are providers of Integrations Platform as a Service (iPaaS).

Universal. Connectors on integration platforms (iPaaS) are not bound to one application. They can exchange data with all connectors on the same platform.

Made to measure. DocuWare has developed its own connector for cloud integrations on Make. Webmethods.io and elastic.io also offer connectors for DocuWare - integrations with on-premises applications are also possible here.

Features & functions. The DocuWare connector on Make provides many features like downloading documents, deleting, storing them in file cabinets and setting stamps.

Other iPaaS providers

Information on the use of DocuWare on other iPaaS platforms can be found on these provider websites: [Software AG Cloud](#) und [elastic.io](#).
